## **DETAILED ACTION**

### **REASONS FOR ALLOWANCE**

The following is an examiner's statement of reasons for allowance:

Applicant has claimed uniquely distinct features in the instant invention which are not found in the prior art, either singularly or in combination.

According to the invention, the memory controller of the computer system is responsible for forwarding a received memory transaction to the appropriate destination. However, in contrast to conventional computer systems, the memory controller includes a memory protection element. In the embodiment described, the memory protection element is a special structure which may block certain memory accesses from proceeding to memory. Writes that are blocked by the structure are discarded without affecting memory.

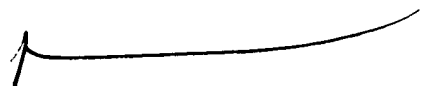

According to another embodiment, an outside agent may establish trust or decide to trust the operating system contained within the secure memory environment by being provided the capability to inspect the software which resides in the secure memory environment. In one embodiment, rather than expose the entire region to inspection, the computer system exposed a cryptographic hash value which represents the secure memory region. This value is generated by a memory hashing engine after the region is secured and store in a digest. In one embodiment, the cryptographic hash value of the secure memory environment represents a software identification value of the secure environment contained therein.

These features are not found or suggested in the prior art.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
